INTRODUCTION

This is the **novathesis** L^AT_EX template Version 6.10.18 from Template!date2023-02-11.

This work is licensed under the L^AT_EX Project Public License v1.3c. To view a copy of this license, visit the [LaTeX project public license](#).

1.1 Welcome to the novathesis Template

This first Chapter introduces the **novathesis** template and how it is organized. In Chapter 2 you can find some specific instructions on how to use this template. Chapter 3 shows some examples and give some hints on how to write your text. Please read these next Chapters carefully.

1.1.1 Your Time is Precious

Did you learn how to drive by sitting by the wheel and throwing your car into the road? Most probably you did take your time *learning the rules* and *practicing* first! Likewise, it is not wise to throw yourself at the task of writing a thesis/dissertation in L^AT_EX without seriously considering the following recommendation!

If you are going to spend zillions of hours writing your thesis/dissertation using the novathesis L^AT_EX template (or some other L^AT_EX template), be wise and spend a couple of hours learning how to use it properly by reading its manual. And then, be even wiser, and spend a few more hours learning some L^AT_EX. I am sure that the time you are investing now will pay itself countless times before you submit your thesis/dissertation.

João Lourenço

1.1.2 Recognition

The **novathesis** template was born in 1996, and what you see now accumulates to many many hundreds (thousands?!?) of working hours, unpaid and stolen from family and friends. This work is available to the community under the [L^AT_EX Project Public License v1.3c](#), which means you are entitled to use it for free and change it at your will. However, if you decide to use this template to write your thesis/dissertation, **be fair to the developers** and:

1. Cite the **novathesis** manual [**novathesis-manual**] in a place of your choice (e.g., in the *Acknowledgments*) of your thesis/dissertation with “\cite{novathesis-manual}”. If you cite it this way, the correct entry will be added automatically to your bibliography (no need to worry with the necessary BibTeX entry, as it will be added automatically);
2. Go to the [project web page in GitHub](#) and give the project a star (marked with a red ellipse at the top-right in Figure 1.1); and
3. Make a donation by visiting the **novathesis** project page and clicking in the button marked with a green ellipse at the top-center in Figure 1.1). Alternatively, just click [HERE](#) and your browser will be directed to the right page.

1.2 The NOVAthesis Template

The **novathesis** template was born at the [Department of Computer Science \(DI\)](#) of [NOVA School of Science and Technology \(FCT\)](#) of [NOVA University Lisbon \(NOVA\)](#), Portugal. But the user base grew... initially grew to other Departments of FCT-NOVA, then to other Schools of NOVA, and later to other Schools of other Universities. Currently more than 25 Schools are natively supported by the **novathesis** template (see Tables 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6).

Escola Superior de Tecnologia de Setúbal (ISEL-IPL)

- All MSc Programs ([MSc](#))

Table 1.6: Other Universities/Schools/Degrees's Schools supported by the **novathesis** template

Other Universities/Schools/Degrees

Escola Superior de Enfermagem do Porto (ESEP)

- All MSc Programs ([MSc](#))

1.3 Getting Started

The template provides an *easy to use* setting for you to write your thesis/dissertation in **LATEX**:

- Select your school;
- Fill your thesis metadata (title, research field, etc) in the file “`template.tex`”;
- Create your thesis/dissertation contents using the files in folder “Chapters”; and
- Process using you favorite LATEX processor (pdfLATEX, XeLATEX or LuaLATEX).

1.3.1 Using Overleaf

If you do not have an account in [Overleaf](#), you must [create one first](#).

Once you have an account, please access the **novathesis** template in [Overleaf](#) and select the green button *Open as Template* (see [Figure 1.2](#)).

Please notice that the version currently available in Overleaf (v6.5.3) is slightly outdated (current version is v6.10.18). A new version will be submitted to Overleaf soon. Until then, please:

1. Download the [latest version](#) from the GitHub repository as a Zip file.

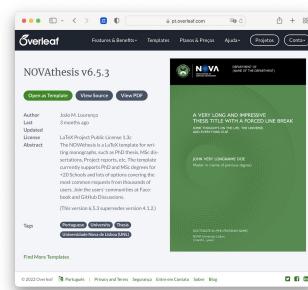

Figure 1.2: NOVAtesis template in Overleaf.

2. Login to your favorite *LaTeX* cloud service. I recommend [Overleaf](#) but there are alternatives (these instructions apply to Overleaf and you'll have to adapt for other providers).
3. In the menu select: *New project* → *Upload project*.
4. Upload the zip file.
5. Select “*template.tex*” as the main file.
6. Let Overleaf compile the document.

1.3.2 Using a Local *LATEX* Installation Local

First of all, start by installing *LATEX* in your computer. There are two main distributions, [MikTeX](#) and [TeXLive](#), and both of them are available for the 3 most popular Operating Systems: Linux, macOS and Windows.

Be aware that a full installation of MikTeX or TeXLive will take near 5 GB of hard disk space. So, think twice before installing the full distribution. See the [novathesis](#) Wiki for the [list of packages required to compile the template](#).

Once you have *LATEX* up and running, remember to install a good *LATEX* text editor. I recommend you to take a look at [this post](#) in the [tex.stackexchange.com](#) site. If you want a quick and dirty recommendation, try [TeXStudio](#).

Now, you must access the [novathesis](#) repository in [GitHub](#), select the green button *Code* and then *download* (or *clone*) the template. You will always get the latest version of the template (currently v6.10.18 from 2023-02-11).

1.4 Getting Help

No! You don't have to use this template to write your thesis. You don't even have to use *LATEX*. However, writing a thesis is serious stuff, and which tool you shall use to write it is not a decision to make lighthearted.

LATEX is hard enough by itself. This template aims at making your life easier, but not easy. If you choose to use this template to write your thesis, you are very welcome. However, don't expect me to provide you help with *LATEX*. Look for help with your friends (you have some friends, don't you?), or search the web, or try even to read some book(s) on *LATEX*. In the end you will certainly find the experience rewarding.

When you come to the point of “*How do I do this with LATEX?*”, remember...

1. To check the [novathesis](#) [wiki](#) and have some hope! :D
2. Google is your best friend.

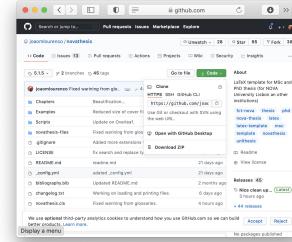

Figure 1.3: The NOVAtesis Project page in GitHub.

3. Search the [GitHub Discussions page](#) for a question related to yours. *If and only if* you don't find one, then post your own question in English please!
4. Search the [NOVAtheis Facebook group](#) for a question related to yours. *If and only if* you don't find one, then post your own question in either Portuguese or English, at your preference.

When you post your own question, remember to **always** state the `novathesis` version number you are using and referring to.

Please do not attempt to contact me directly (email, Messenger, etc)...
I WILL NOT REPLY!

1.4.1 Suggestions, Bugs and Feature Requests

Help: If you just need some help, see above [Section 1.4](#).

Suggestion: Do you have a suggestion/recommendation? Please add it to the wiki and help other users!

Bug: Did you find a bug? Please open an issue. Thanks!

New Feature: Would you like to request a new feature (or support of a new School)? Please open an issue. Thanks!

1.5 Donors

The [list of Donors](#) is available in the `novathesis` Project page.

1.6 Disclaimer

Although the `novathesis` template is endorsed by some Schools (e.g., [linked from FCT-NOVA web site](#)), the `novathesis` template **this not an official template** for any School.

The `novathesis` template exists to make your life easier and we do our best to make it compliant to the supported (+25) Schools' regulations but, in the end of the line, you and only you are accountable for both the look and the contents of the document you submit as your thesis/dissertation.

NOVATHESIS TEMPLATE *USER'S MANUAL*

This manual is outdated and must be revised!

2.1 Introduction

This Chapter describes how to use the NOVATHESIS [LaTeX \(novathesis\)](#) template. It is assumed that you have a working of \LaTeX , either local (in your own computer) or remote (in Overleaf), and that you were able to generate a PDF for the default configuration of the template: a PhD thesis for [NOVA School of Science and Technology \(FCT\)](#).

2.2 Quick Start

2.2.1 With a Local \LaTeX Installation

Follow these steps to get started with a local \LaTeX installation:

1. Download \LaTeX . There are two major \LaTeX distributions — [Mik\TeX](#) and [TeXLive](#) — that share lots of similarity, and \LaTeX documents are portable between them. This means that, for most users, both systems are equally usable.

[TeX-Live](#) is maintained by (La)TeX developers and is certainly the best distribution you may install in your computer: However, the default distribution will take more than 5 GB on your hard disk... so, if you are not short on disk space, install [TeXLive](#)!

[Mik\TeX](#) will, by default, install only a minimal set of packages. The extra/additional packages will be installed on the fly. Installing packages on the fly is useful if disk space is limited, but has its own caveats in the longer term. Definitely choose [Mik\TeX](#) if you're short on disk space.

Which one to download? There are [pros and cons for both distributions](#) so it is essentially a question of where does your heart falls first! Mine is in [TeXLive](#), but yours can be elsewhere! :D

2. Install L^AT_EX. Installation of L^AT_EX is as hard as installing any other software. Just do your best and you will certainly succeed.

3. Download the **novathesis** template by either:

- Cloning the [GitHub repository](#) with

```
git clone --depth=1 https://github.com/joaomlourenco/novathesis.git
```

or

- Downloading the [latest version from the GitHub repository as a Zip file](#).

4. Download additional School specific files if applicable:

Universidade do Minho (UMINHO) download the required *NewsGotT* font files from <https://github.com/joaomlourenco/novathesis-extras/raw/main/Fonts/NewsGotT.zip> then unzip the file and copy the 3 font files

“n015002t.ttf”, “n015003t.ttf”, and “n015006t.ttf”

to the folder

“NOVAthesisFiles/FontStyles/Fonts”.

Escola Superior de Enfermagem do Porto (ESEP) download the required *Calibri* font files from <https://github.com/joaomlourenco/novathesis-extras/raw/main/Fonts/Calibri.zip> then unzip the file and copy the 4 font files

“Calibri.ttf”, “Calibrib.ttf”, “Calibrii.ttf”, and “Calibriz.ttf”

to the folder

NOVAthesisFiles/FontStyles/Fonts.

5. Compile the document with you favorite L^AT_EX processor (pdfL^AT_EX, XeL^AT_EX or L^AuL^AT_EX).

- The main file is named “**template.tex**”, but you are free to rename it as you please.
- Either load the main file in your favorite [LaTeX text editor](#) and press the appropriate (*magic*) button to generate a PDF file, or open a terminal and compile it with “`latexmk -pdf template`”. If you use a L^AT_EX text editor, please notice that the **novathesis** template uses “*biber*” and not “*bibtex*” to process the bibliography, which means that most probably you have to open the *Editor Preferences* and somewhere (depending on the Editor you are using) change “*bibtex*” to “*biber*”.

- Notice that, due to the external font sets used, pdfL^AT_EX will not work for both UMINHO and ESEP, and you have to use either X_EL^AT_EX ("latexmk -pdfxe template") or LuaL^AT_EX("latexmk -pdflua template").

6. Edit the files in the "Config" folder:

File	Contents
0_memoir.tex	Options specific for the memoir package. <i>Don't touch this file unless you know what you are doing!</i>
1_novathesis.tex	Configure the template (e.g., the document type, the school, the languages used, etc.)
2_biblatex.tex	Configure the bibliography.
3_cover.tex	Configure cover contents (e.g., author's name, thesis/dissertation title, advisers, committee, etc)
4_files.tex	Configure the files for chapters, appendices, annexes, abstracts, glossaries, etc...
5_packages.tex	Configure additional packages and commands.
6_list_of.tex	Configure the lists to be printed (table of contents, list of figures, list of tables, list of listings, etc). <i>Don't touch this file unless you know what you are doing!</i>
9_nova_fct.tex	Configuration specific to NOVA-FCT.
9_nova_ims.tex	Configuration specific to NOVA-IMS.
9_nova_itqb.tex	Configuration specific to NOVA-ITQB.
9_ulisboa_fmv.tex	Configuration specific to ULISBOA-FMV.
9_uminho.tex	Configuration specific to UMINHO (all Schools).

7. Recompile de document.

8. And you're done with a beautifully formatted thesis/dissertation! :D

2.2.2 With a Remote Cloud-based Service

Follow these steps to get started with a remote L^AT_EX installation:

- Download the [latest version from the GitHub repository as a Zip file](#).
- Login to your favorite LaTeX cloud service. I recommend [Overleaf](#) but there are alternatives. These instructions apply to Overleaf and you'll have to adapt for other providers.
- In the menu select [New project](#) → [Upload project](#).
- Select "template.tex" as the main file.
- Follow from Step 5 above in Section 2.2.1 (With a Local L^AT_EX Installation).

2.3 Folder and Files

The `novathesis` template is organized into many files and folders. At the main level it includes the following files and folders listed in Table 2.1.

Table 2.1: The folders and files.

Name	Type	Access	Contents
<code>novathesis.cls</code>	<i>file</i>		The main class file.
<code>template.tex</code>	<i>file</i>		The main template file. You need to <i>compile</i> this file with one of pdfLATEX, XeLATEX, or LuaLATEX to obtain the PDF file (“ <code>template.pdf</code> ”).
<code>template.pdf</code>	<i>file</i>		A possible result of applying pdfLATEX to the “ <code>template.tex</code> ” file. The look and feel of the document will depend on the parametrization/configuration (e.g., School) of this template.
<code>Chapters</code>	<i>folder</i>		Examples of document contents, including Chapters, Appendices, Annexes, Abstracts, Glossaries, Lists of Symbols, etc. Replace them with your own.
<code>Bibliography</code>	<i>folder</i>		Where all your bibliography files should be located. You may have many as you want, as long as you add them to the template with “ <code>\ntaddfile{bib}{FILENAME.bib}</code> ”.
<code>NOVAthesisFiles</code>	<i>folder</i>		Additional files for the <code>novathesis</code> template. Unless you know what you are doing, avoid messing up with the files and folders inside this folder.

2.4 novathesis.cls Class Options

The `novathesis.cls` class (`novathesis.cls`) can be customized with the options listed below.

`doctype=OPT`

`phd(*), phdplan, phdprop, msc, mscplan,
bsc, plain`

The type of the document.

`phd` → PhD thesis (*default*)
`phdplan` → PhD thesis plan
`phdprop` → PhD thesis proposal
`msc` → MSc dissertation
`mscplan` → MSc dissertation plan
`bsc` → BSc report
`plain` → Other report

school=OPT

nova/fct(), nova/fcsh, nova/ims,
nova/ensp, nova/itqb, ulisboa/ist,
ulisboa/fc, ulisboa/fmv, uminho/ea,
uminho/ec, uminho/ed, uminho/ee,
uminho/eeg, uminho/em, uminho/ep,
uminho/ese, uminho/ics, uminho/ie,
uminho/ilch, uminho/i3b, iscteiul/eta,
ips/ests, ipl/isel, ulht/deisi, other/esep*

The names of the university and of the school.

This option changes the typesetting of the cover and of some other School specific formating, like margins, fonts, paragraph spacing and indentation, etc...

lang=OPT

en(), pt, fr, es, it, de*

The main language for the document.

en → English (default)
pt → Portuguese
fr → French
es → Spanish
it → Italian
de → German

fontstyle=OPT

bookman, charter, fourier, kpfonts(),
mathpazo1, mathpazo2, newcent*

The font set to be used in the document.

Please note that a font set include definitions for the main text, headings, maths, etc.

chapstyle=OPT

*bianchi, bluebox, brotherton, dash,
default, elegant(*), ell, ger, hansen, ist,
jenor, lyhne, madsen, pedersen, veelo,
vz14, vz34, vz43*

The chapter style

The look of the chapter beginning.

converlang=OPT

en, pt()*

The language to be used when typesetting the cover page.

otherlistsat=OPT

front(), back*

Where to put the other lists besides the table of contents.

The default is (front) before the main text. But some scientific areas prefer them at the end of the document (back), just before the Appendixes.

statement=OPT

true, false()*

Include or don't include the contents of the "statement" file.

The default is for this file to be ignored (if it exists).

linkscolor=OPT

darkblue(), black*

The color for all the hyperlinks in the PDF file.

The "media=paper" option (see below) will override this option to "black"

2.5. ADDITIONAL CONSIDERATIONS ABOUT THE CLASS OPTIONS

spine=OPT <i>true, false(*)</i>	Generate the book spine and the last page in the PDF.
biblatex=OPT <i>OPT={list of options for biblatex}</i>	Customize biblatex, the bibliography management system used in this class. Probably you will want to change the value of the biblatex “style” option. For other customizations of biblatex check its manual.
memoir=OPT <i>OPT={list of options for memoir}</i>	Customize the base class memoir. The memoir manual should be the first document to be consulted when looking for “ how can I do this? ” You may want to change the base font size from 11pt to a smaller (10pt) or larger (12pt) size. Also, remember to change the “draft” to final when your document is finished.
media=OPT <i>screen(*), paper</i>	Behavior to be customized in the school options/configuration. Expected definitions for screen are: left and right margins are equal and use colored links. Expected definitions for paper are: left and right margins are different and use black links.

2.5 Additional considerations about the class options

In this section we will provide some additional considerations about some of the customizations available as class options.

2.5.1 The main language

The choice of the main language with the option “lang=OPT” affects:

- **The order of the summaries.** First is printed the abstract in the main language and then in the foreign language. This means that if your main language for the document is English, you will see first the “abstract” (in English) and then the “resumo” (in Portuguese). If you switch the main language for the document for Portuguese, it will also automatically switch the order of the summaries to “resumo” and then “abstract”.
- **The names for document sectioning.** E.g., “Chapter” vs. “Capítulo”, “Table of Contents” vs. “Índice”, “Figure” vs. “Figura”, etc.

- **The type of documents in the bibliography.** E.g., "Technical Report" vs. "Relatório Técnico", "PhD Thesis" vs. "Tese de Doutoramento", etc.

No matter which language you chose, you will always have the appropriate hyphenation rules according to the language at that point. You always get Portuguese hyphenation rules in the "Resumo", English hyphenation rules in the "Abstract", and then the main language hyphenation rules for the rest of the document.

2.5.2 Class of Text

You must choose the class of text for the document. The available options are:

1. **bsc** — BSc graduation report.
2. ***mscplan** — Preparation of MSc dissertation. This is a preliminary report graduate students at DI-FCT-NOVA must prepare to conclude the first semester of the two-semesters MSc work. The files specified by `\ntdedicatoryfile` and `\acknowledgmentsfile` are ignored, even if present, for this class of document.
3. **msc** — MSc dissertation.
4. **phdprop** — Proposal for a PhD work. The files specified by `\ntdedicatoryfile` and `\acknowledgmentsfile` are ignored, even if present, for this class of document.
5. **prepphd** — Preparation of a PhD thesis. This is a preliminary report PhD students at DI-FCT-NOVA must prepare before the end of the third semester of PhD work. The files specified by `\ntdedicatoryfile` and `\acknowledgmentsfile` are ignored, even if present, for this class of document.
6. **phd** — PhD dissertation.

2.5.3 Printing

You must choose how your document will be printed. The available options are:

1. **oneside** — Single side page printing.
2. ***twoside** — Double sided page printing.

2.5.4 Font Size

You must select the encoding for your text. The available options are:

1. **11pt** — Eleven (11) points font size.
2. ***12pt** — Twelve (12) points font size. You should really stick to 12pt...

2.5.5 Text Encoding

You must choose the font size for your document. The available options are:

1. **latin1** — Use Latin-1 ([ISO 8859-1](#)) encoding. Most probably you should use this option if you use Windows;
2. **utf8** — Use [UTF8](#) encoding. Most probably you should use this option if you are not using Windows.

2.5.6 Examples

Let's have a look at a couple of examples:

- Preparation of PhD thesis, in portuguese, with 11pt size and to be printed single sided (I wonder why one would do this!)
`\documentclass[prepphd,pt,11pt,oneside,latin1]{thesisifct-nova}`
- MSc dissertation, in English, with 12pt size and to be printed double sided
`\documentclass[msc,en,12pt,twoside,utf8]{thesisifct-nova}`

2.6 How to Write Using LATEX

Please have a look at Chapter 3, where you may find many examples of LATEX constructs, such as Sectioning, inserting Figures and Tables, writing Equations, Theorems and algorithms, exhibit code listings, etc.

2.7 Example glossary, acronyms, and symbols

This is the first occurrence of an abbreviation: [abbreviation of a longer text \(abbrev\)](#). And now the second occurrence of the same abbreviation: [abbrev](#). And a new acronym with capital letter: [And extension of a xpto \(xpto\)](#) and reused [xpto](#). Let's also use a few other acronyms such as [acronym aaa \(aaa\)](#), [acronym aab \(aab\)](#), [acronym aba \(aba\)](#), [acronym bbb \(bbb\)](#) and [xpto](#). In geometry, the area enclosed by a circle of radius [r](#) is πr^2 . Here the Greek letter [\pi](#) is equal to the ratio of the circumference of any circle to its diameter. Lets add “[computer](#)” to the glossary! Be carefull with mathematical symbols in acronyms, please see the definition of [\mu](#).

Reference to Potassium [K⁺](#) and Sodium [Na⁺](#) as well.

A SHORT LATEX TUTORIAL WITH EXAMPLES

This Chapter aims at exemplifying how to do common stuff with LATEX. We also show some stuff which is not that common! ;)

Please, use these examples as a starting point, but you should always consider using the *Big Oracle* (aka, [Google](#), your best friend) to search for additional information or alternative ways for achieving similar results.

3.1 Document Structure

3.2 Dealing with Bibliography

Citing something online [[wiki:shuntingyard](#), [flex](#), [bison](#)].

3.3 Inserting Tables

3.4 Importing Images

3.5 Floats, Figures and Captions

Vestibulum pellentesque felis eu massa.

3.6 Text Formatting

3.7 Generating PDFs from LATEX

3.7.1 Generating PDFs with pdflatex

You may create PDF files either by using `latex` to generate a DVI file, and then use one of the many DVI-2-PDF converters, such as `dvipdfm`.

Alternatively, you may use `pdflatex`, which will immediately generate a PDF with no intermediate DVI or PS files. In some systems, such as Apple, PDF is already the default format for LATEX. I strongly recommend you to use this approach, unless you have a very good argument to go for `latex + dvipdfm`.

A typical pass for a document with figures, cross-references and a bibliography would be:

```
$ pdflatex template  
$ bibtex template  
$ pdflatex template  
$ pdflatex template
```

You will notice that there is a new PDF file in the working directory called `template.pdf`. Simple :)

Please note that, to be sure all table of contents, cross-references and bibliographic citations are up-to-date, you must run `latex` once, then `bibtex`, and then `latex` twice.

3.7.2 Dealing with Images

You may process the same source files with both `latex` or `pdflatex`. But, if your text include images, you must be careful. `latex` and `pdflatex` accept images in different (exclusive) formats. For `latex` you may use EPS ou PS figures. For `pdflatex` you may use JPG, PNG or PDF figures. I strongly recommend you to use PDF figures in vectorial format (do not use bitmap images unless you have no other choice).

3.7.3 Creating Source Files Compatible with both `latex` and `pdflatex`

Do not include the extension of the file in the `\includegraphics` command. E.g., use

`\includegraphics{sonwman}`

and not

`\includegraphics{sonwman.eps}`.

If you use the first form, `latex` or `pdflatex` will add an appropriate file extension.

This means that, if you plan to use only `pdflatex`, you need only to keep (preferably) a PDF version of all the images. If you plan to use also `latex`, then you also need an EPS version of each image.

To be included in the sections above

Para fazer citações, deverá usar-se a chave da referência no ficheiro BibTeX. Se for uma única referência [Artho04], usar um “~” para ligar o \cite{...} à palavra que o precede (... referência~\cite{Artho04}). Caso queira fazer múltiplas citações [Shavit95, Silberschatz06, Moss85], deverá agrupá-las dentro de um único \cite{...}.

Note que o ficheiro de bibliografia pode ter tantas entradas quantas quiser. Apesar das aquelas cuja chave seja referenciada no texto é que serão incluídas na listagem de bibliografia.

Footnotes¹ will be numbered and shown in the bottom of the page.

A Tabela 3.1 ilustra alguns conceitos importantes associados à construção de tabelas:

- i) Não usar linhas verticais;
- ii) A legenda deve ficar por cima da tabela;
- iii) Usar as macros \toprule, \midrule e \bottomrule para fazer a linha horizontal superior, interiores e inferior, respectivamente.

Table 3.1: Test results summary.

Test	Anomalies	Warnings	Correct	Categories	Missed

¹This is a simple footnote.

Total	12	33	10	5A, 6B, 10C, 2D	2
-------	----	----	----	-----------------	---

As figuras a inserir no documento deverão ser de qualidade, preferencialmente em formato vectorial (PDF vectorial) e não em *bitmap* (PNG, JPG, etc). As imagens *bitmap* (Figura 3.2) não escalam bem e têm reflexos negativos na qualidade do seu documento. Pelo contrário, as imagens *vectoriais* Figura 3.3 escalam muito tanto quanto o necessário sem degradar a qualidade da imagem.

Só deve usar *screenshots* se não tive mesmo nenhuma alternativa. Em vez de gerar um *screenshot*, tente usar uma impressora virtual PDF e imprimir para um ficheiro PDF. Regra geral obterá um PDF vettorial. Mesmo que o seu PDF contenha imagens, elas terão sempre qualidade maior ou igual à que obteria com um *screenshot*.

Para agregar várias figuras numa única... Poderá assim referenciar o conjunto como Figura 3.4 ou as sub-figuras separadamente como 3.4() e 3.4(a).

3.8 Equações

O LaTeX é uma ferramenta poderosa para escrever em estilo matemático. Permite inserir fórmulas no meio do texto como por exemplo esta: $ax^2 + bx + c = 0$. Também permite que as fórmulas sejam destacadas numa linha separada e centradas na página

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

ou numeradas

$$\text{aaa} \tag{3.1}$$

que depois pode ser referida no texto como sendo a equação 3.1

aa

$$a \tag{3.2}$$

$$b \tag{3.3}$$

$$c \tag{3.4}$$

$$(3.5)$$

3.9 Test for listings

Testing the package “listings”...

Testing the package “minted”...

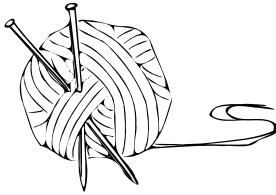

Blah...

Figure 3.2: Imagem em formato *bitmap* (JPG)

Figure 3.3: Imagem em formato PDF vectorial

(a) Novelo de lã

(b) Tempestade com neve

Figure 3.4: Exemplo de utilização de *subbottom*

3.10 Test for algorithms

Uncomment the algorithms source below and add the following to file “`5_packages.tex`”

```
\usepackage{algorithm2e}  
\RestyleAlgo{ruled}
```

and uncomment

```
\ntaddlistof{listofalgorithms}
```

in file “`8_list_og.tex`”.

A

NOVATHESIS COVERS SHOWCASE

This Appendix shows examples of covers for some of the supported Schools. When the Schools have very similar covers (e.g., all the schools from Universidade do Minho), just one cover is shown. If the covers for MSc dissertations and PhD thesis are considerable different (e.g., for FCT-NOVA and UMinho), then both are shown.

B

APPENDIX 2 LOREM IPSUM

This is a test with citing something [ecoop12-dias] in the appendix.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.
